

The writing process for Task 1 was relatively smooth; I had a general idea and outline of what I wanted to write, and I researched some credible sources to further elaborate on my points. Some of my successes and what was naturally easy for me were that I had prior knowledge of my topic (communication in software development), so it wasn't hard to plan out the essay. I feel like I could've written a better introduction and conclusion on why I wanted to research my topic, and I could've provided better analysis of my evidence. In regard to the course learning outcomes, I probably didn't generate inquiries, as I didn't generate questions relating to what I wanted to research. I also didn't achieve multiple ways of writing as I did not include any symbols or images with meaning, only text. For information literacy, I tried my best to find credible sources, which I feel like I've achieved, as I found two sources from college students relevant to my topic. In Task 1, I had a more descriptive research genre, as my goal was to explain my topic to the reader. I only partially contributed knowledge and drew conclusions as I only briefly explained how the lack of communication led to NASA's spacecraft disintegrating in 1999. My goal wasn't really to draw conclusions about this particular task, but next time I'll try better to elaborate on my evidence. For revision, I didn't have anyone reply to my discussion, but in class, my partner said my topic was good as it related to my interests. I proofread Task 1 and made sure to reword verbose sentences and fix any grammatical mistakes before submitting it.
